### DETAILED ACTION

## Drawings

1. The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81(c). No new matter may be introduced in the required drawing. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d).

# Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Lee (US 6,628,455 B1).

Lee discloses a monitoring device for detecting the amount of signal light propagated in a light transmitting path, and

Application/Control Number: 10/564,793

Art Unit: 2872

comprising: said light transmitting paths in which at least end portions are held approximately in parallel and two light transmitting paths are set to one set (Fig. 2A, 201 and 202, 227 and 228); and a prism (230) having two interfaces perpendicular to each other, and returning the incident signal light toward an original incident direction by twice reflecting the signal light at the two interfaces (210, 231); wherein the signal light emitted from the end face of one light transmitting path among said one set of optical transmitting paths is incident into said prism (see Fig. 2A); the signal light is returned to the original incident direction by twice reflecting the signal light at the two interfaces of the prism (see Fig. 2A); the signal light is incident to the end face of the other light transmitting path among said one set of light transmitting paths; and the signal light of a predetermined ratio is leaked from at least one of the two interfaces of said prism (see 216), wherein light receiving means for receiving the signal light leaked from the interface is arranged and as a reference (see 230), wherein, when it is seen from a direction perpendicular to a plane orthogonal with respect to the mutually orthogonal two interfaces of said prism, a line segment for dividing a narrow angle of said orthogonal two interfaces into two equal parts is inclined from a direction parallel with an optical axis direction of the end

Art Unit: 2872

portion of said light transmitting path (see Fig. 2A), wherein a filter (207) for leaking-out one portion of the incident light to the exterior of a light transmitting property medium is formed at least one interface among the two interfaces of said prism, wherein a deflecting means for changing an emitting direction of the signal light leaked from the interface of said prism is arranged (see Fig. 2A).

### Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to EUNCHA P. CHERRY whose telephone number is 571-272-2310. The examiner can normally be reached on M-F 6:30-4:00, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephone B. Allen can be reached on 571-272-2434. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
